QuickShelf

The rapid intermediate shelf system

QuickShelf is the rapid, patented intermediate shelf system for large load carriers (LLCs). It has been developed to provide an efficient and safe means of transporting goods in multiple layers. And it is being unveiled at interpack 2023.

QuickShelf is the perfect solution for companies that want a safe and secure way to transport stacked goods and store them efficiently. It can be used in a huge variety of ways with electronic components, delicate goods, products with high-quality surface finishes, pressure-sensitive goods and foods.

The patented QuickShelf system comprises special bracket strips and intermediate shelves fitted with mounting brackets that clip into the bracket strips. Thanks to this solid connection, loads are transmitted via the container sidewalls, so that upper layers do not press down on the layers below. Products are perfectly protected and there's no need for additional packaging materials.

Not only does this ingenious system help users maximise load density, and thereby achieve efficient transport operations and lower emissions, it also reduces volumes when the container is empty. What's more, any intermediate shelves that aren't being used can be stacked in a large load carrier in seconds. When turned over, the intermediate shelves slide right down to the base of the pallet without catching on the bracket strips. As a result, all the various components in the container system – the pallet, sleeve, QuickShelves and lid – are always organised in a compact format, whether the container is full or empty.

The QuickShelf system can be configured to suit customer requirements and its basic version comprises

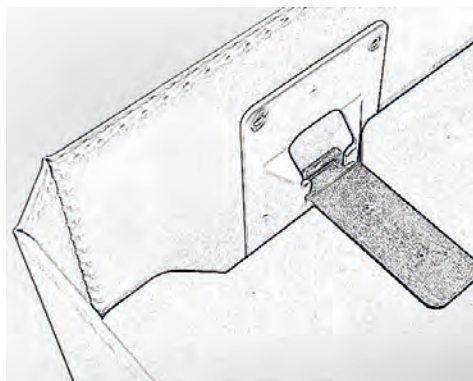

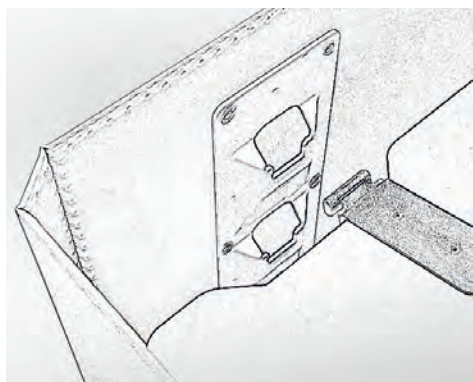

- At least four bracket strips that can be extended in line with the number of clip-in positions required.
- At least one QuickShelf intermediate shelf (available with different lamination options)

The patented QuickShelf system offers enormous benefits

- Non-stackable goods can be stacked
- Maximum load density and lower volume when empty
- Savings on packaging materials thanks to protective intermediate shelves
- Distributing the load to the sidewalls ensures goods aren't damaged

QuickShelf is a system that is sustainable

- 100% recyclable
- Available in TRIPLEX EcoLine quality
- Suitable for retrofitting into pre-existing systems
